If you don't have Autodesk on your PC, you can get it here [Create a new drawing file](#). Select the mesh: Change the resolution to the one that you are using to the point that your mesh looks fine. Load the mesh in Autocad, the one that you created above. Be sure to turn off "snap to grid" if it's on. Assign a user ID to your drawing files to share them among different users. For example, you can assign the same drawing file to multiple team members or contractors, and each person can access their own drawing through the ID, not the whole file. Automatically match imported geometry to your CAD data to avoid clashes. Use advanced layers to create base and advanced layers, view them separately, or combine them into one layer and work on both.
