QuickBooks is an accounting system designed to help small businesses with accounting, payroll, and management. Released in the mid 1990s, the software is both a desktop and online application. The initial QuickBooks product line included QuickBooks Accounting, QuickBooks Payroll, and QuickBooks Self-Employed. QuickBooks Accounting is a point-of-sale (POS) system that handles point-of-sale (POS) data, account balances, and transactions, as well as vendor and customer information. QuickBooks Payroll provides integrated employment payroll and time-keeping functionality for both full-time and independent contractors, while QuickBooks Self-Employed provides a single-user desktop accounting solution for sole proprietors, partnerships, LLCs, and other sole proprietorships. The launch of QuickBooks in 1997 marked a change in direction from the industry focus on business suite offerings to a focus on core applications. All types of businesses can benefit from accounting, and QuickBooks provides three solutions to fit the needs of different businesses. QuickBooks Accounting and Self-Employed provide out-of-the-box functionality, while QuickBooks Payroll provides customization options to meet any business's needs. Komodo Edit is a source code editor with an integrated development environment (IDE) and an integrated debugger (profiler). Originally named Komodo, it was developed in 2004 by Dmitry Baranovskiy and Dmitry Teterin (who later became its sole maintainer). Komodo Edit was designed to be a programmer's text editor and a development environment; it combines a WYSIWYG interface with code editing and analysis tools such as syntax highlighting, an outline view, and code completion. Komodo Edit also features support for plugins. Komodo Edit is free and open-source software licensed under the GNU General Public License (GPL). Komodo is also known as a No-GUI text editor. Komodo Edit is cross-platform, and supports Windows, macOS, Linux, and Android (through the use of a plugin), and OS X and iOS in virtual machines. Komodo Edit has an online version available for free use in some countries. In addition to its functions as a WYSIWYG

To strengthen the existing National Stepping Up to Cancer program (NSUC), improve the extent of the program, and provide research and evaluation support for all activities, the National Institutes of Health (NIH) intends to develop a Comprehensive Cancer Control Network (CCCN) grant. The NIH plans to create a cancer control research agenda, train a cadre of cancer control researchers, and evaluate the NSUC. The NIH will support the CCCN through the National Cancer Institute (NCI), with an emphasis on the following functions: (1) supporting the NSUC through grants to community-based organizations and other nongovernmental organizations (NGOs), (2) providing technical assistance to NGOs, (3) providing training and dissemination of information and program development, (4) supporting the CCCN community advisory board (CAB), and (5) serving as a repository of CCCN activities and results. The NSUC grant will support a comprehensive system of cancer control in a way that allows for the integration of cancer control activities in a coordinated, multi-faceted effort. National efforts are directed at national planning, development of state and local programs, institutional and community capacity building, and evaluation of the system. In addition to NSUC, NCI's cancer control activities are enhanced through other grants, such as the Breast Cancer Screening, Demonstration and Evaluation Project (BCSDP), which is managed in collaboration with NIH. BCSDP aims to demonstrate the cost-effectiveness of different models of organized breast cancer screening and to evaluate these models in a large, multi-state, clinical trial. BCSDP is designed to evaluate the program and policy effects of these models through the state and local use of the trial results, and to obtain detailed information on the organization, financing, and outcomes of screening programs. In addition to the roles of the NSUC and the BCSDP, the National Cancer Program (NCP) supports a number of other cancer control activities, including an effort to monitor the efficacy of mammography screening, an observational study of the use of HMOs in cervical cancer screening, and a cancer registry. In addition, NCI supports cancer control activities through research grants and cooperative agreements that allow for the development of new research initiatives.
