You can copy it on any USB flash drive or other devices, and take it with you whenever you need keep track of your books on the breeze, without having to go through installation steps. The program gives you the possibility to add a new book to the database by providing details about the title, publisher, author, cost, present value, rating, ISBN, room, book case, shelf, and color. Additionally, you are allowed to add a short description of the book, keep track of loaned items, and insert keywords. Posted 1 year ago MayamantharajaJan Posted 1 year ago I was about to purchase this software, but after seeing the problem, i decided to keep the money and not download it. The problem is that the author has recently updated the software, so you can not purchase the software until the author decide to publish the last update as a new version. I hope that author can fix this issue and make a new version of software to solve this issue. Posted 1 year ago kamalmurthy Posted 1 year

The present invention relates to a device for cleaning work pieces, and in particular to a device for cleaning glass surfaces. There are several known methods of cleaning glass surfaces. The first method involves blowing a stream of air at the surface to be cleaned in order to remove the dust and the other contaminants. This method is not applicable for cleaning some types of glass surfaces, such as glass surfaces in automobiles where it is desired to avoid the loss of strength of the glass by heating it. A second method involves the use of electrical discharge, by the action of which the contaminants are removed. This method is not useful for the cleaning of glass surfaces in automobiles, since this type of glass is electro-conductive and any electrical discharge to the surface would produce an electrostatic charge which could cause the glass to break. The third method is the use of a solvent such as a detergent. This method has the disadvantage that it will not remove all of the contaminants from the surface, and the solvent has a tendency to leave a residue of contaminants which will prevent the glass from being properly cleaned. Molecular mechanics/dynamics and linear response for the Green's function for the Poisson-Boltzmann equation. The second-order pseudopotential theory of Eisenberg, Cohen, and Holst is used to derive an approximate expression for the interaction energy of a system of charges and another system of charges, both in the presence of a third system of charges. The expression obtained is tested for the case in which a dielectric boundary and a charge in the center of a cavity is surrounded by a neutralizing uniform background, where the density distribution and potential inside the cavity are determined by the Poisson-Boltzmann (PB) equation.
