Design your dream house on the go! Use your mobile phone to draw and design your house right on the go. This is a compact CAD utility designed to help users create 3D buildings in a clean and intuitive working environment. No installation necessary! This is Java-based utility, so you should make sure you have previously installed the working environment on the computer, otherwise you cannot run the utility. Energy3D gives you the possibility to draw platforms, walls, doors, windows, floors, and pyramid, hip, or custom roofs, convert the current roof to a gable one, and reveal or hide shadows and heliodons. You are allowed to opt for an animated sun motion display, generate solar radiation maps, as well as set up the dedicated parameters related to energy analysis, namely time and location, temperature, energy

values, and overall heat transfer coefficient for walls, doors, windows, and roofs. Interactive mode and export options What's more, you can undo or redo your actions, show or hide annotations, zoom in or out, enable the interactive mode for previewing the building rotated to different angles, resize the house, as well as preview the printable parts from your drawing. Last but not least, you can print the generated images or save them to PNG file format, manually rotate the buildings to different angles in the 3D environment using the mouse, select the unit of measurement, and pick the colors for the door, roof, floor, window, and platform. During our testing we have noticed that Energy3D provides very good image quality, carries out a task very quickly, and no errors showed up throughout the entire process. However, just like any similar Java programs, it eats up CPU and memory, so the overall performance of the computer may be hampered.
