I think you are trying to scrape a web page that's designed to be used by humans and not machines. However, the remote evidence is now in your face. Also, the structures, decisions, processes and documents that you might be interested to consult must be clearly and explicitly identified, even if they can be determined only with difficulty and in the course of multiple iterations. All you would get by scraping it would be a bunch of duplicate information, much of it broken, all of which you'd have to somehow get agreement on. Try a different area for input and output data.
