KeyMacro is a free graphical user interface (GUI) which allows you to create and manage your own macros for mouse clicks, menu selections, or any other action. Unlike general programming languages, macros in KeyMacro are written in Visual Basic (VB). These work-flows are stored in configuration files. KeyMacro has a lot of built-in functionality, such as generating shortcuts to frequently-used tasks. You can set the shortcut to run a macro. KeyMacro provides the flexibility to use any.vbs,.ini, or.jse script as a macro. Macros can be saved and edited, added to or removed from a configuration file. The configuration file is saved in a XML format, and stores any macro in the file. It is a great way to maintain a set of frequently-used programs. You can run any VB script as a macro. You can even run programs that generate an executable file. The executable files are stored in a directory and can be run from any place without any need to copy. Macros are useful for repetitive tasks such as copying or moving folders. You can set a shortcut to run a macro and quickly perform that task. KeyMacro supports Windows XP and higher. It is free to download and can be used without any advertising or registration. MacroBase Description: MacroBase is a free tool to automate your repetitive tasks. It enables you to run a macro or a script by pressing the shortcut key. You can also define macros for frequently-used tasks with hotkeys. MacroBase is a powerful tool, which saves you the time to perform repetitive tasks. It runs your macros by pressing a single hotkey. You can setup the shortcut keys to run macros. You can select the language in which the macros are to be run. The macros can be run in Java script, VB Script, C++, Ruby, or any other language. MacroBase allows you to have your own set of macros, with different languages and different input methods. You can also download and install additional macros.
