Q: Unable to add a JavaScript file to a sharepoint project using the workflows I have created a sharepoint project in VS 2013 Ultimate. When I click on "new" -> "webpart" -> "javascript file" and then select the "as link" then I get the following error when I select "OK". The selected file could not be added to the web site because the authentication requirements are not satisfied. The specified user name or password is incorrect. If you have added this file to a specific SharePoint project, change the authentication credentials of the project. If you have added this file to a specific SharePoint document library, change the authentication credentials of the library and try again. Thanks in advance

A: I have a similar problem and the following actions solved it: Open your project in Visual Studio (e.g. using the Project menu in the Solution Explorer). In the File Explorer window, select your solution.
