DeskScapes PC/Windows

DeskScapes is a program that enables you to customize your desktop wallpaper, thanks to some attractive backgrounds and image effects. Neatly customize your workspace The user interface is quite appealing and easy to navigate through. A welcome screen informs you that there are some panels in the bottom that you can access, in order to personalize backgrounds. You can simply select and use a wallpaper, which can be either an image, a video, hybrid, or dynamic. You can also filter backgrounds according to their rating, apply a random background, or recolor your existing wallpaper (select the part of the wallpaper you want to recolor, pick the color to apply, and adjust color saturation). Configure animations, colors, and effects Furthermore, you can change settings for each type of wallpaper. For instance, you can set the number of shapes you want to have displayed at once, the speed of an animation, or you can create slideshow images or hide particular objects in a picture. In order to further customize your wallpaper, you can add image effects - Alien World, Black and White, blue channel only, blue sky filter, burn effect, canvas texture, desaturate, grayscale, sepia, mirror or snow. Additionally, you can search for a particular background, download and install more backgrounds, adjust quality settings, enable support for additional graphics cards, correct aspect ratio on secondary monitors, set desktop icon transparency, and more. To end with Objects take a few seconds to load after you click them, and the program froze once during our tests (after applying a background). Otherwise, DeskScapes uses a moderate amount of system resources and certainly brings a unique feel to any desktop. Description: Kisnet is a free wireless network discovery and monitoring tool. Kisnet is a free wireless network discovery and monitoring tool. This software enables you to see whether your computer is broadcasting a network, discover which networks you can access, and determine whether they are encrypted. Apart from broadcasting and discovering networks, Kisnet will keep an up-to-date log of all the traffic that happens on your network. Kisnet features include: * Logs all network activity, including traffic between computers on the local network and outgoing network traffic * Remote network discovery * Configure hidden networks * View and inspect the packet data * Display information about networks discovered * Detect and display 802.11b/g networks * Detect and display 802.11n
