Typed Query - Code Generator is an OO library, which enables you to create your queries and use them to query your database from an Object Oriented language. Using this abstraction, the library provides a dynamic environment with full control over queries, with the ability to hide the underlying details of the database (i.e., SQL queries) and make them invisible. Typed Query - Code Generator Features: The library enables you to execute custom SQL queries against an oracle database or a SQL Server database. The library manages the code that is generated, instead of the developer having to write the code. Typed Query - Code Generator Licensing: The library is licensed under the MIT License.
