Maxis has launched a new virtual reality (VR) experience on the Oculus Rift and the HTC Vive for “The Sims 4 VR,” which has you experience as one of the residents of the neighborhood that the game simulates. Now you can share your immersive virtual world with the “The Sims 4 VR” community. In addition, the game also supports desktop play. The goal of the game is to create your own “The Sims 4” community. You can also participate in the currently available community. The most distinctive characteristic of the new VR experience on the Oculus Rift is that you can hear the sound of the neighborhood of the game. It sounds like a real neighborhood with audio. When interacting with a character, you will find that you can “hear” everything that is happening around you. The sound of the apartment and noises from the room around you seem to be in real time. For games and applications for Oculus Rift and HTC Vive, please click here. Virtual reality is changing our lives. Do you think we will ever abandon our mobile phones? In some countries, a large number of people already refuse to touch them. It is a question of our future. Of course, it would be ideal if we never gave up our phones. They would always be there to help us in our lives. It is great that we can use our phones even when traveling. That is an added benefit that virtual reality has brought to the world. In this virtual world, you are still able to make phone calls, enjoy games and even surf the web when you do not have the time to do so. However, it is almost impossible to completely ignore the phone. To answer the call, you have to take it out. If you are trying to have some rest, you need to be ready to pay attention to the phone. You need to pull out the charger as soon as it begins to ring. This reality has been taken to the next level by the company Oculus. The company has developed a virtual reality headset called the Oculus Rift. It gives you a complete immersive experience. To remove the headset is like removing the visual barriers. With the Oculus Rift, you can go to the depths of a galaxy, view the stars and feel the wind in your face. Now, you can enter the world of the “The Sims 4.” The game is available in two versions: Oculus Rift and the Rift. Each version

### **What's New in the AnyCAD Free?**
