KEYMACRO is a tool for Android smartphone users that enables them to perform the extraction of data from them using powerful forensic tools. Use it to obtain data from non-rooted devices. Includes a database of decoders and a password breaker that can crack any Android device password. The information in the database of decoders is constantly updated with new versions and add-ons and the tool is continually expanded. Andriller Product Key Description: Andriller is a tool that offers Android smartphone users the possibility to obtain data from them using powerful forensic tools. They provide the means to automatically extract data from non-rooted devices using a set of decoders. Use a large number of database decoders The application displays a fairly comprehensive interface which makes it easy to use by just about anyone. Its overall GUI design is rather plain and simple but it offers the advantage of being able to quickly and easily access all its features and tools from the main window. Andriller enables you to import a number of database files which are processed by the application and used to generate reports. Once it manages to decode the data, it's made available to you in a HTML file. With this tool you can use decoders for Android devices which can obtain account information, messages, contacts, call history, browser data and much more. Automatically generate reports Getting the aforementioned data types is itself a very simple process. All you have to do is connect your phone to the PC, choose the output folder for the report, check to see if the phone is recognized and then, with a final click on the 'Go!' button, the app starts performing its job. Depending on the amount of data that is to be extracted, the task might take a couple of minutes but Andriller notifies you when it's done and the new HTML file will contain an easy to follow table with all the required data. Crack passwords and PINs Andriller can also help you on a bad day when you forget your lockscreen combination or your PIN number. It makes use of the gesture.key, setting.db or locksettings.db files in order to get the data needed to crack passwords. Conclusion Andriller is by all means a very capable tool that has a lot of potential to extract sensitive data from your Android smartphone and considering this fact, it needs to be used responsibly and it goes without saying that if you intend to use it, take all the 1d6a3396d6

Crack passwords and PINs Andriller can also help you on a bad day when you forget your lockscreen combination or your PIN number. It makes use of the gesture.key, setting.db or locksettings.db files in order to get the data needed to crack passwords. Description: The geolocation function of Smartphones and cellphones in general, enables you to obtain the address of the place you are at with the GPS system of the device. Many websites include the geolocation function, which enables you to obtain a map of the place you are at on the web. Its uses are many and it enables you to do many things such as obtain a map of the place you are at, or use the internet in public places. Geolocation You might be familiar with the geolocation function on your phone, but don't worry, this software doesn't require that you know how to use a cellphone. So if you want to try the geolocation function, then you don't need to know anything about smartphones. If you already know a thing or two about smartphones, then you might be wondering if this software is any use to you. You probably use the geolocation function for one of these two reasons: 1) If you want to
