ImTOO MPEG Encoder Platinum - ImTOO MPEG Encoder Platinum is a software which enables you to convert video files between multiple formats, including AVI, ASF, MOV, MP4, WMV and FLV. The interface of the program is simplistic and intuitive. Media files can be imported into the list by using either the file browser or "drag and drop" method. Batch processing is supported. In the queue you can check out the name, duration, target type, output size and status of each video. After you set the destination directory and output extension, you can proceed with the encoding process. Additionally, you can modify audio and video settings when it comes to the channels, quality, size, frame rate, aspect ratio, zoom, bit rate, sampling rate, volume and others. But you can also preview the clip in a small, built-in media player and take snapshots, split it by marking the start and end time, customize the CPU core number, set post-task actions (e.g. exit program, shutdown computer), enable the tool to run in the background in normal priority, create a new profile, view file properties, change the interface skin and language, use a bit rate calculator, and more. The media encoding software uses a pretty high amount of system resources, includes a brief help file for novices, quickly finishes a task and manages to preserve a good image and sound quality. We haven't come across any issues during our tests and highly recommend ImTOO MPEG Encoder Platinum to all users, regardless of their experience level
