## Microsoft Exchange Eximwiz Utility

Microsoft Exchange Eximwiz Utility converts Microsoft Exchange Bulk Export format (.csv) files to Microsoft Mail import format. After creating the output file, you can use the tool to interactively import addresses into a Microsoft Mail post office on the network, or you can e-mail the import file to external recipients. In addition, new functionality enables you to export from Microsoft Mail, and create a .csv file to add Microsoft Mail recipients as Microsoft Exchange custom recipients. Eximwiz is useful when directory synchronization between a Microsoft Exchange Server implementation and Microsoft Mail is not a viable option (if, for example, you are trying to populate a trading partner's Microsoft Mail system with relevant addresses, such as purchasing agents, from your global address list). Eximwiz can also be used to manually perform directory synchronization between a Microsoft Exchange Server computer and a foreign mail switch that does not support the Microsoft Mail Dirsync protocol. Get Microsoft Exchange Eximwiz Utility and give it a try to fully assess its capabilities! Downloads: Technical Support: Forum: Eximwiz Download: The latest version of Eximwiz is 4.3.3. This tool is fully tested with the following systems: Microsoft Windows Vista Microsoft Windows XP Microsoft Windows 2000 Microsoft Windows NT 4 Microsoft Windows 98 Microsoft Windows ME The list of requirements for each version of Eximwiz is shown below: Microsoft Exchange Eximwiz Utility Requirements: Microsoft Windows Vista Microsoft Windows XP Microsoft Windows 2000 Microsoft Windows NT 4 Microsoft Windows 98 Microsoft Windows ME Microsoft Exchange Server 2007 Windows Vista: Microsoft Exchange Server 2007 Windows XP: Microsoft Exchange Server 2003 Windows 2000: Microsoft Exchange Server 2000 Microsoft Exchange Server 5.5 and lower Microsoft Exchange 5.0 and lower Microsoft Exchange 2000 Microsoft Exchange Server 5.5 and lower Windows NT 4: Microsoft Exchange 5.5 and lower Microsoft Exchange 2000 Windows NT 4 Microsoft Exchange 2000 Microsoft Exchange 5.

### What's New in the?

General: \* Tool runs on Windows 95/98/NT/2000/XP/Vista \* Import and Export.csv files from and to Microsoft Exchange Server \* Supports simultaneous conversion of multiple files at the same time \* Create and export.csv files from or import.csv files into Microsoft Exchange Server \* Perform directory synchronization between Microsoft Exchange Server and Microsoft Mail \* Import addresses from Microsoft Exchange Server into Microsoft Mail \* Export addresses from Microsoft Mail to Microsoft Exchange Server \* Export all exchange addresses from all exchange folders and recipients to Microsoft Mail \* Export all Microsoft Exchange Server recipients into Microsoft Mail \* Export all Microsoft Exchange Server mailboxes (mail, public folder, shared folder) to Microsoft Mail \* Export public folders with files into Microsoft Mail \* Generate flat.csv files from Microsoft Exchange Server \* Generate mailto: addresses from the.csv file \* Works with Microsoft Exchange Server 2003 and Microsoft Exchange Server 2007 \* You can export from any exchange folder into any mail folder of Microsoft Exchange Server \* A directory can be synchronized with any number of mailboxes. The utility will ask if you want to perform a directory synchronization or import/export \* For optimal performance, the utility should be installed on the host operating system \* If importing is done to a server with the same name as the user that installed the utility, the program creates the necessary virtual mailboxes \* A new.csv file has a random name \* Select the output folder (in the directory you are working in) to save the exported file \* Export options -<select a directory> -<select an output folder (the working directory)> -<select a file name> -<select a name for the header in the output file> -<select a file name for the footer in the output file> -<specify the number of lines in the header> -<specify the number of lines in the footer> -<specify the maximum number of lines in the file> \* How to run the utility -<select a directory to synchronize> -<select an output directory (the working directory)> -<input the name of the output file> -<input the name of the input file> -<select the number of lines in the header> -<select the number of lines in the footer> -<select the maximum number of lines in the file> \* Synchronization options -<select folders to export&gt
