You can also use them to create custom color palettes or to get a feel for the colors you are working with. \* Color Balance. This tool allows you to choose from colors that appear in the image to add a similar color in order to make the image appear as close as possible to the original. TIP While working with color, colors that appear on your monitor may look different on the actual image. You can change this by going to View ⇒ Preview or View ⇒ Show Color Histogram to compare your monitor colors to the actual colors in the image. \* Layer Comps. A feature of Layer Comps enables you to use a variety of composite and merging options for images and photos.
