installation • 4GB or more memory ApexSQL Search Support: 3a67dffeec

ApexSQL Search is a database management software that aims at simplifying your daily routine. It helps you in finding the objects you need in the database without having to use hard to use SQL server Management Studio. Search for SQL objects and texts Researches objects for you on the server and allows to you copy to clipboard, more user friendly Does not require any SQL Server Management Studio and can be easily integrated into other applications Safely rename records and analyze dependencies ApexSQL Search is a part of the ApexSQL Family of applications which all strive to simplify your database environment. ApexSQL® Search is a database management software that aims at simplifying your daily routine. It helps you in finding the objects you need in the database without having to use hard to use SQL server Management Studio. Search for SQL objects and texts Researches objects for you on the server and allows to you copy to clipboard, more user friendly Does not require any SQL Server Management Studio and can be easily integrated into other applications Safely rename records and analyze dependencies ApexSQL Search is a part of the ApexSQL Family of applications which all strive to simplify your database environment. If you have several versions of SQL Server installed on your computer, you get the possibility to choose where ApexSQL Search should be integrated with. Integrates within all major SQL Server versions If you have several versions of SQL Server installed on your computer, you get the possibility to choose where ApexSQL Search should be integrated with. In other words, you can benefit from the functions of ApexSQL Search when using a certain SQL Server version, whereas a different edition will not feature them. Search for SQL objects and texts The application creates a separate menu within the host software, thus making it easy for you to choose the type of search you want to perform, either object or text-based. When it comes to launching an object search, you get to choose the database, as well as specify the type of objects you are interested in (such as assemblies, certificates, credentials, columns, indexes, event notifications, parameters, roles, rules, schemas, services, triggers and so on). To perform a text search, you only need to enter the keyword, select the server and the database names, and simply initiate the search. If you want to filter the results, you can deselect some of the available objects, and then

#### What's New In ApexSQL Search?

ApexSQL Search is a SQL Server search application that makes it easy to search for objects that are stored in SQL Server databases, or a SQL Server database, in other SQL Server databases. Takes advantage of a Microsoft SQL Server feature called Database-Level Security. Ability to search for SQL objects in the following databases: • Application databases • Information Schema • System Databases • User databases • Master Data Providers • Management Studio • Replication Services • XML Services There are built-in SQL Server object types that you can easily search for: • Table and views • Procedures, functions, triggers, roles • SQL Server objects and .NET Framework objects Tips: If you can search for objects in all the above-mentioned databases, it means that you have Database Level Security enabled. ApexSQL search is a small, free utility that is very useful if you use SQL Server. ApexSQL SQL Server Professional is a free SQL Server Management Studio trial application that searches for SQL Server objects and helps you quickly locate them in other SQL Server databases and servers. Facilitates the locating of tables, views, procedures, functions, data type definitions, stored procedures, database objects, users, logins, triggers, etc. ApexSQL SQL Server Professional Description: ApexSQL SQL Server Professional is a small, free utility that is very useful if you use SQL Server. Find out if SQL Server objects are stored in a database or server, even if they are not located in the primary database or server. Safely locate SQL Server objects that are stored in other databases and servers. ApexSQL SQL Server Professional is a free utility that makes it easy for you to locate SQL Server objects in other databases. You can launch this tool by simply clicking on the utility's icon, or right-click the link within SQL Server Management Studio. The application opens a new window to display the information that is related to the SQL Server objects that you seek. Keep in mind that you can only launch this tool if the Database Level Security feature is enabled on the SQL Server edition that you are using. ApexSQL SQL Server 2012 products are intended to be a complete turnkey solution to help you

---

achieve fast data-related tasks, regardless of your SQL Server editions (local or Microsoft Azure), whichever SQL Server Edition SQL Server Express Edition, Windows Server 2012 or Windows Server 2012 R2 that you are using, whether
