AutoCAD's Markup Assist enhances the experience of reviewing, editing and verifying designs in your CAD software. We've added two new features to Markup Assist to get you more feedback faster: Insert markup into your drawings and collect feedback directly from your computer screen. Manually add markup that lets you verify your designs and collect feedback from your team using lightweight tools that require no CAD experience. Individually insert and edit documents in the Drawing Markup window, which appears when you select Insert in the Drawing toolbar. By selecting a document, you can directly start editing or inserting markup from the document itself, without opening an editable drawing or viewer. Together, these features enable you to interact with the design while the model remains stable. Additional tools for the enhanced experience: Convert from text to annotation. Save time and save energy. Convert text to annotative drawing objects and automatically convert into a shape, line or solid. Also convert text to an annotation object in a second drawing for approval and review. (video: 1:53 min.) Geometry and text tools in the Editing and Viewing toolbar are simplified. Two tools now appear: Add detail and Add to shape. The former lets you add topology to a solid that you're viewing or adding. The latter lets you add an object to a polyline that's being edited or added. (video: 1:18 min.) You can drag and drop annotation objects to easily move them and reposition them on the drawing surface. (video: 1:06 min.) Open and convert Web-based files, including PDF, JPG, PNG and GIF documents. Use a new tool to quickly add objects and annotations to designs without opening another application. Convert any Web-based file into AutoCAD objects and then insert them as an annotation on your drawing. Use the new convert to annotative drawing tool, which lets you create an annotative drawing directly from a Web-based document in less than a minute. (video: 1:35 min.) Use drag and drop to insert and move annotation objects. (video: 1:12 min.) Text tool support for software page breaks. Software page breaks or hard tabs can make it difficult to enter text in AutoCAD and other applications. The new insert as tab tool solves this problem by letting you insert text at the current software page break. (video: 1:
