and the program transcribes all files within a folder. Transcribe each file individually with DatasetTranscriber A folder contains audio files DatasetTranscriber's autosave feature lets you know right after you start transcribing, so you can keep up with time and start working on other tasks that don't require you to physically work on your PC all the time. This lets you work with DatasetTranscriber wherever you are, and whenever you want to. You can take it with you anywhere: this is a portable tool. When you open the app, it automatically detects the audio files you have in your folder and lists them all. Double-click a file to play it, and then transcribe with the program. If you don't have any audio files, you can add one right away by typing in the folder path and pressing Enter. After you've transcribed all the audio files, you can choose from three different colors for each file: take your pick, then hit the Process button in the toolbar to start the transcribing process. The result? You'll have a transcript file in the same folder as all the original audio files, whose name is generated based on the name of the audio file that was started. You can edit the text as you see fit, and then proceed to the next file if you wish. DatasetTranscriber comes with an autosave feature, so even if you're not using it right now, it will save your work for later. DatasetTranscriber Problems You need to upgrade to the latest version of DatasetTranscriber to use its latest features. The app works best on Windows XP, Vista, or Windows 7. Oct 18, 2012 Not Just a Transcription Tool: I've recently been working with Audacity and other transcribing utilities to quickly copy, verify, or otherwise work with recordings, but generally I find that every time I try to transcribe something in Audacity, I just end up having to start up another app to do the transcribing. Then I loose track of the original file and have to start all over again. Sometimes recording is just part of the process, and I don't have time to transcribe it all at once. DatasetTranscriber is an incredibly helpful tool to aid in this process. I can start working on transcribing a recording on the same day I record it, and DatasetTranscriber is able to pick up the audio file, start transcribing, allow me to create a transcription.txt file and mark it for insertion into another program. I can even import these files into Audacity to play them and do other things. October 31, 2015 Overall: A great tool! August 11, 2014 DatasetTranscriber for Mac: A great tool!
