It's time to update your entire video editing workflow.Q: Where should i put the objects I generate during my application? In my project, I need to generate different objects at different points of my application. This is not just the case of writing strings to logfiles, or updating session states. Sometimes i'm generating primitives of different classes for a single operation. Who should be responsible for managing all the objects which are generated? Where should I keep them? should I keep them within my solution, or create a repository? A: Since you didn't specify which language, I'll assume you're using C#. I think it depends on how the classes you generate are used. If they are only required for your application (i.e. you're not going to distribute them) you should put them in a custom assembly that can be referenced by your application. If they

can be used outside of your application, you can put them in a separate assembly (just make sure the classes are not sealed, or the users won't be able to derive from them). If the classes are required for your application and are not used outside of it, I'd keep them in the solution, in a directory that you reference (through reference properties, or even a
