Autodesk Exchange uses a mechanism called "plugins" to enable customization of the software. The plugins are available from the Autodesk Exchange Applications website, and are intended to be deployed as add-on applications. The plugin system supports a wide range of functionality, ranging from tools and add-ons to entire applications. They can either be listed in the Autodesk Exchange Apps or be installed as a service to run on the machine during the work session. A plugin system should integrate well with the application's Windows shell and, if the application is designed as an AutoCAD extension, make use of a registered DLL to allow the user to interact with the application using Autodesk Exchange's user interface tools. They are often part of the following classifications: Plug-in A plug-in is an executable application which is intended to be loaded and run separately from the original application. It does this by using one or more entry points, which in turn interact with the main application to perform the function. Plug-ins are often used to extend the functionality of AutoCAD, adding tools and functions which are not available as part of the application itself. Plug-in Examples: Windows Explorer plug-in Dynamic Editor plug-in LinkEditor plug-in LevelView plug-in Color Picker Geometry Object Tools Street Add-on Add-on An add-on is a set of functionality which is not provided as part of the original application, but that can be accessed and used in a similar manner. This functionality is often in the form of the application providing a set of tools and functions as if it were a standard part of the application. Add-ons are used to provide a set of tools and functions, which are not part of the original AutoCAD program, but which are nevertheless useful. Add-on Examples: Layout Tools Pattern Fill Visual LISP Autodesk maintains a Visual LISP (VLISP) implementation for AutoCAD 2010+. This is a replacement for the standard AutoLISP implementation. Visual LISP is a dialect of LISP (List Processing), a high-level procedural language developed by McCarthy in 1964. It is most often used for programming in AutoCAD, in conjunction with LISPworks by Autodesk, a Visual LISP package developed by Autodesk. Visual LISP is mainly used to create ca3bfb1094
