

This game was developed by Dejima Games Inc., using TARSUS and INTEGRITY. TARSUS is a large-scale online battle RPG played by 20 million users as of July 2017. INTEGRITY is a turn-based RPG action game made for PC. Elden Ring Game is made as a single player quest that will finally lead to a nice story. The main character of the story is Tarnished who is in the middle of the Elden Ring War. Tarnished's powerful Elden Lord skills are powered by the power of the Elden Ring so Tarnished must break the Elden Ring when he reaches old age. The Elden Ring War between Lizards and Demons. This conflict will be going on for the duration of the story. This conflict is not played online, but for the storyline it is important to participate in. Your goal is to lead Tarnished to power. Furthermore, you will be able to "rise" from the "Tarnished" over the course of the story. However, you will also have to carefully choose what skills to equip and how to develop your character. You can learn how to play Tarnished using the game demo. ♦PlayHow to Play for Beginners Tarnished's main attack is called the "Battle Skill". The Battle Skill can be used once per match, but you can avoid it when you have high HP. Rage and resistance use strength to attack. Attack Strength: The power of Tarnished's attack. What's new in Elden Ring:

I'm a world-renowned mage and hero, skilled from childhood. About thirteen years before the start of the story, I visited the country of Ialdabaoth, which is known as the Land of Magical Monstrosity. Now that is in the distant future...

Ialdabaoth caught a dangerous offender, imprudently and frivolously. And the Land of Magical Monsters issued a request for my intervention.

When Ialdabaoth requested me to dispatch troops to the Land of Magical Monstrosity, I replied to him, "I like you very much, but you were the one who wronged us. I am not keen to have my people be victims of your hatred. I shall not send any mages to dispatch your troops. You must punish the offender for yourself!"

Ialdabaoth was incensed at the words of mine, and the Land of Magical Monsters was enraged by them. My brother, the King of the Mages, summoned me to the Headquarters of the Land of Magical Monsters. My sister, the Queen of the Land, delivered instructions that, "This is your last request from us. If you do not order the commander dispatched, then you will lose your life as a criminal. But you said that you would not send any mages to help us, and yet you come under the orders of the Land of Magical Monsters? You become a thorn in our eyes once again!"

King of the Mages told me, "Let us play at surviving this. You have come here on your own. You will not be arrested. But you must never appear in public again.

I did as my brother commanded. I was seriously heartbroken, but I was promptly distracted by the anxious concerns of my people. I did not let them know that I would never return. At the moment, I focused all my energy on rejuvenating my race. Thus, I could not concern myself with the rest of the world, and thus, I wandered past the distant time.

Treatment of a new base for silver halide emulsions. 5-Aminotriptycyl phosphonic acid (H(2)ATP) is less active than the usually employed p-nitrophenylphosphonic acid as a stabilizer in the precipitation of silver halide emulsions. The rate of precipitation with H(2)ATP is about half that with the more commonly used p-nitrophenylphosphonic acid, and the emulsions prepared are of excellent stability. The rates of precipitation of silver halide emulsions are greatly affected by the pH of the precipitation medium. At low pH, rates of precipitation are high, but the emulsions are not stable to multiple exposures in the developing solutions. At high pH, rates of precipitation are slow, but the emulsions are stable to multiple exposures in the developing solutions. Silver halide emulsions precipitated at pH 4.5 have about 8-12% higher sensitivity than those prepared at pH 5.7. The exposure latitude of the emulsions is from -1.5 to +1.5 (Log M). The hue of the emulsions is more sensitive to pH than the speed of precipitation. The addition of sodium azide to the precipitation medium stabilizes the emulsions and, at the same time, decreases the rate of precipitation. The emulsions are unaffected by low concentrations of pentamethyldiethylenetriamine (PMDTA), which usually stabilizes the emulsions.Q: Sorting in dictionary I am trying to sort the values in dictionary which I am doing so as follows but it is not working the_dict = {"Bugs":["012", "012", "024", "012", "120"], "Maui":["012", "024"], "Sequoia":["020", "024", "030"], "Nome":["012", "024", "030", "040"]} sorted_dict = dict(sorted(the_dict.items(), key=lambda(x, y): (x[1] > y[1]), reverse=True)) print(sorted_dict) my final output should be like 012-#3##24 012-#3##24 024-#4##020 024-#4##020 020-#5##012 020
