The microcirculation is what perfuses blood in the smaller arteries, capillaries and veins. It comprises the networks of capillaries that are the smallest branches of the blood circulation. The networks of capillaries that are the smallest branches of the blood circulation in all tissues throughout the body. They perf in tiny capillary mouths or junctional valves that connect the lumen to the interstitium. When a cell dies, it stops generating new capillaries. Capillaries provide a home for waste removal, give the body its nutrients 4 vital nutrients and provide a carrier for return of these nutrients thousands of important substances, ions, nutrients etc. when the capillary is smaller The microcirculation provides the body with a vast network of tiny capillaries that make a network of capillary aa67ecbc25
