What's New In?

AutoCAD continues to evolve with new features and functionality, and with new ways to apply them. New features are also geared to support the many ways to use the program. That means AutoCAD has a new UI, new ways to interact with the UI, a new application menu structure, new tools, new workflows, and new ways to apply what you see. We've introduced the new UI, improved the experience of interacting with the UI, created a flexible yet efficient way to add commands and items to the ribbon, and designed to help you work effectively. You'll start to see features that are enabled when you choose the New tab in the UI and then look in the Interactive section of the tab, including the Markup Import feature. The Markup Import feature continues to be a first-rate tool to allow you to import content from other tools or even other applications. We're also working on expanding the Markup Assist feature to allow you to create content with the Markup Assist feature. To give you an idea of what we're thinking, the example in this video shows how you could easily import a mobile phone number from a receipt and use the added punctuation to input the number into your drawing. Customizable UIs: The new UI has a unique look and feel that supports a new application menu structure. With this new menu structure, you have access to the tools, command sets, and workflows that you prefer or need in your own way, without being limited by the menu options found on the ribbon. You'll find a number of new menus on the ribbon, including the application menu, and we've redesigned the command sets to make it easier to add commands and functionality into your drawing by simply selecting from the menu. With the new UI, all the common UI elements are shared with other views in the ribbon, like the Blocks panel. As a result, you have a more streamlined and efficient user experience when you use the ribbon. The new ribbon, which also includes all of the standard ribbon options, allows you to quickly see your drawing tools and customize your ribbon to support the specific workflows you need. New Tools: There are a number of new tools that you can add directly to your drawings. As you begin to customize your ribbon and command set, you'll want to consider adding the new tools so that you can have them available at your fingertips in a way
