The STL vector and list objects also come in an autoCAD namespace which allows using STL methods in AutoCAD. AutoCAD's native programming interface is: AutoCAD Architecture, a native COM-based API used for developing 2D and 3D CAD, graphical user interfaces and applications. It is developed and maintained by Autodesk.

Autodesk Architecture can be integrated with AutoLISP, Visual LISP and Microsoft.NET/VB.NET or directly used in C#. In 2009, Autodesk announced that the AutoCAD LISP API would be replaced with the Visual LISP language extension for AutoCAD 2013. When using AutoCAD for general GIS operations and applications, functionality is provided by the GDAL library (which uses a large subset of the OGR API). History AutoCAD started as a postscript CAD drawing program on the Macintosh in 1982. In 1984, AutoCAD was made available on a DOS version, and a C version, was released for the Microsoft Windows platform in 1986, and a version for the Macintosh was released in 1988. AutoCAD (in both versions for the DOS and Windows platforms) originally used PostScript to draw the drawings. However, in 1990 Autodesk switched from PostScript to a bitmap (bitmap art) and tiled drawing engine (tiled art). In 1994, AutoCAD was converted to use a central image store, and pixel editing tools were introduced. In 1998, AutoCAD 2000 introduced a GUI, and AutoCAD R12 added the capability to combine simple two-dimensional drawings with three-dimensional ones and to use the three-dimensional modeling language (3DML) to import or export a shape file. In 2002, AutoCAD R15 introduced the parametric dimension tool. AutoCAD 2002 introduced a geometric modeling environment called 3D Warehouse, which featured a 3D warehouse management system, in addition to the drawing editor. In 2005, AutoCAD R16 introduced a new GUI and the ability to integrate with Microsoft Windows SharePoint Services. In 2006, AutoCAD 2009 introduced a number of new features, including the ability to convert 2D drawings to 3D, a geometry constraint set, and parametric dimensions. It also supported AutoCAD R20's hidden lines feature. In 2007, AutoCAD 2010 introduced a programmable API.

Field of the Invention The present invention relates to a solid-state imaging device and a method of driving the solid-state imaging device. 2. Description of the Related Art A MOS type solid-state imaging device with a PN junction diode, that is, a CMOS sensor, which is disposed near a light receiving part, converts light into a photoelectric current by the PN junction diode, and accumulates the photoelectric current. The solid-state imaging device is driven by a so-called rolling shutter method. A frame is captured by the solid-state imaging device, and then the solid-state imaging device starts the capturing of each row in the same sequence, and ends the capturing of each row at the same time. In the frame, time is given to each row from the first row to the last row. When the solid-state imaging device starts capturing a frame, a difference between the image capture start time of each row is generated. A difference between the image capture start time of each row is accumulated, and when the solid-state imaging device captures a frame, the image capture start time of each row is compensated for.#!/bin/sh # The docker build environment is only set on the master branch if ["\$TRAVIS_BRANCH" == "master"]; then if ["\$DOCKER_BUILD_FORCE" == "1"]; then set -e fi # Setup docker environment variables export DOCKER_IMAGE_TAG="\$TRAVIS_TAG" # Enable docker-in-docker if ["\$TRAVIS_REPO_SLUG" == "cloud-bigquery/bigquery-public-data"]; then eval "\$(docker-machine env default)" fi # Enable docker-in-docker for bigquery if ["\$TRAVIS_REPO_SLUG" == "cloud-bigquery/bigquery-public-data"]; then eval "\$(docker-machine env bigquery-docker)" fi # Enable docker-in-docker for python
