Install Disc, US  
Domestics, Extras. I  
have used a loop to  
replace the code i  
wanted with what i  
want. The loop is:  
User Input is: 1qt  
Output is: 40.23 I do  
not want the code  
that is there and i  
have it all in a  
variable so i can get  
it programmatically,  
but it shows up like

---

this if i try to replace  
it with a variable:

More User Input is :  
1qt Output is : 0.26 I

have tried in c++  
using this code:

```
string sugest = "1";
```

```
    string output =  
    atoi(sugest.c_str());
```

```
and this one: string  
sugest = "1"; string  
output = "40.23"; I
```

have also tried  
converting the user

---

input into an int and then doing a single digit to int and then leaving everything else as is. A: You might want to replace the code you want to replace with whatever the new code would be, then replace the code that replaces the code. Remember that in

---

C++ string is a class. You can assign anything you want to a variable of type string, and that "thing" can be anything that is convertible to a string. I wouldn't try to 6d1f23a050
